

Nuzzle Flow

Upon initially downloading the app, there is a special flow. See spec doc. User gets to see features before having to sign up or create a profile

The "Nuzzle" Screen has the cylinder that rotates with potential match's photos

User can swipe to spin it faster or slower, or even backwards

At any speed, user can tap "z" to like or "x" to dislike (or no choice just keeps that photo within the rotation)

A single tap stops the rotation on that photo. Then user can tap a button to see that match's detailed profile

The "Nuzzle Up" screen is everyone that has liked the User (regardless of if they have liked them back) and any mutual matches.

A mutual match will have a 'z' icon

User can tap to see the Match's profile, and then like or dislike them ('z' or 'x'). If they Like, that user is automatically added to chats, and user is automatically redirected to that chat. If they dislike, user is deleted from list

The User's Profile and the Match's Profile will be in an identical format. User can edit their own profile using the edit icons for text or for photos
